

From Adam Frillman, PowerSchool

Follow Up Questions and Answers from Friday's Meeting

- **Will parents see custom name?** No, not in the parent portal/app. If the teacher wants, they can choose to have the custom name print on reports that they generate, but this is an option only (not required).
- **What if we pull in an old category when copying assignments?** This functionality uses our migration services, which was originally set up to move both assignment and scores from PowerTeacher Gradebook to PowerTeacher Pro. With that in mind, by default, the old category will copy with the assignment, but will not automatically create that old category in the new section (and will also not affect the category weighting that is set up by the teacher/admin). If this happens, the teacher can either create the old category in the new class or can re-categorize the assignments that copied over to categories that are currently in use.
- **Will Parent Cell Phone be made a field in core SIS?** This feedback has been plugged into Dev and will be considered in future releases.
- **Need for a resource that assists in utilizing semester-long and year-long classes when setting up graduation planner?** This resource has been requested.

Thank you
